Abstract

Keywords: Covid 19, Coronavirus disease, cases - recovered - deaths, Czech Republic, situation dashboard

1. Introduction

The COVID-19 pandemic, also known as the coronavirus pandemic, is an infectious disease caused by the SARS-CoV-2 virus. [1].

COVID-19 affects different people in different ways. Most infected people will develop mild to moderate illness and recover without hospitalization. Most common symptoms: fever; cough; tiredness; loss of taste or smell. Less common symptoms: sore throat; headache; aches and pains; diarrhoea; a rash on skin, or discolouration of fingers or toes; red or irritated eyes. Serious symptoms: difficulty breathing or shortness of breath; loss of speech or mobility, or confusion; chest pain. Seek immediate medical attention if you have serious symptoms. Always call before visiting your doctor or health facility. People with mild symptoms who are otherwise healthy should manage their symptoms at home. On average it takes 5–6 days from when someone is infected with the virus for symptoms to show, however it can take up to 14 days.

The best way to prevent and slow down transmission is to be well informed about the disease and how the virus spreads. The virus can spread from an infected person's mouth or nose in small liquid particles when they cough, sneeze, speak, sing or breathe. These particles range from larger respiratory droplets to smaller aerosols. It is important to practice respiratory etiquette, for example by coughing into a flexed elbow, and to stay home and self-isolate until you recover if you feel unwell. [2].TODO ...

The continuing global spread of COVID-19 has seriously jeopardized human mental health. How to reduce

the damage of COVID-19 pandemic to people's mental health? Protect yourself and others from infection by staying at least 1 metre apart from others, wearing a properly fitted mask, and washing your hands or using an alcohol-based rub frequently. Get vaccinated when it's your turn and follow local guidance? The Czech Ministry also had to deal with these questions. They had to enforce rules or guidelines to limit the spread of COVID-19. Was those rules and measures effective? That is the purpose of this work - find out, whether the measures had impact ...
